Creating a Strategic Security Partnership

TrackTik is helping us realize our vision of value-driven security services that are fully aligned to our customers' needs. Connectivity, data insight, and automation enables us to do security differently and deliver greater impact for your investment.

Expect more from
today's security services

POWERED BY
TRACK TIK

Consistent service excellence

With TrackTik, we have complete operational oversight and control, and we're able to automate repetitive tasks and standardize protocols. It means we can take your objectives and analysis of your security environment and plan the security services that best match your circumstances.

"TrackTik allows us to pivot our services to address the facts on the ground as they unfold"

We can then define the actions your security personnel need to take across your sites and drive reporting consistency using customized report templates. Collecting data on incidents over time also means we can spot trends and patterns that enable us to take a proactive approach to our services and pre-empt problems.

Transparency and accountability as standard

With the TrackTik Client Portal, we can share targeted, real-time data on your security operations giving you a complete picture over what's happening on the ground. Permissions-based access gives you full control over who sees what within your organization. At the same time, being able to compile electronic reports in the field allows our guards to submit reports in a few clicks making sure the data you receive is pertinent and timely.

Invoicing based on precise operational data means you can be sure that our billing will be accurate and reflect your contract and SLA to the letter. A fully traceable data trail and standardized reporting also helps support your compliance requirements.

Getting greater value from your security services

Once security becomes data-driven, it can deliver even greater value. As well as protecting your physical assets, and your people, security can also help protect your reputation and brand; it can support your information security strategy; business continuity; health and safety; and regulatory compliance. The insight gleaned can help guide decision-making in procurement and facilities management too and generally give you a complete, end-to-end view of your operations like never before.

Greater satisfaction for our customers

As far as we're concerned, the greatest win from delivering security services powered by TrackTik is the increase in our customers' satisfaction. With technology, we're raising expectations and redefining what security means today, and delivering greater value for customers.

"We are proud to deliver precision and value through our security services"
